Release Version 1.2.0 (2013/10/24)

Modules

Item			Version
FW	NVR	NS-1040	01.02.0000.0005
		NS-1080	
		NS-8060	
	Camera Package		DP v2.17 02.17.0000.0032
Application	Install Wizard		1.2.0
	Remote Live Viewer		1.2.0
	Playback System		1.2.0
	Backup System		1.2.0
	Verification Tool		1.2.0
	Offline License Tool		1.2.0
Document	Local User manual		1.2
	Remote User manual		1.2
	QSG		1.1

Enhancement

1. Support to display images with H.264 codec over 4 megapixels on local monitor.
   - **H.264**: no resolution limitation on single channel, the total capacity is around:
     - 8 channels: 5M / others: 2M
     - 6 channels: 8M / others: 2M
   - *The actual performance depends on the type of cameras.

   No change on MPEG4/MJPEG:
   - **MPEG4**: Up to 2M (1920x1080) per channel
   - **MJPEG**: Up to 4M (2560x1600) per channel but with limited fps support
   - *The local display won't work if either one side is over the limit.

2. Improve the backup mechanism to be able to backup videos via WAN with stable 2M bandwidth.[1]
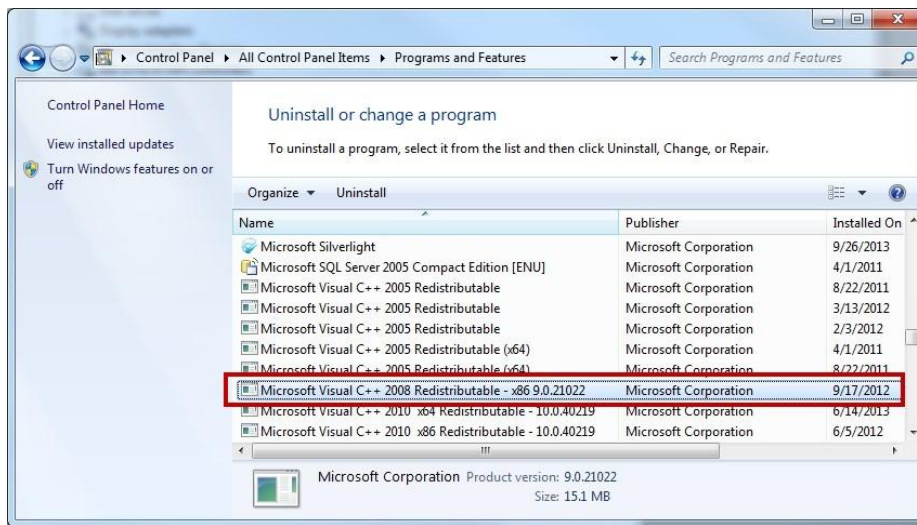

Bug Fixed

1. Fixed the issue that recording mode will be changed from motion recording to always recording under certain conditions.
2. Fixed the issue that no video images show when clicking to playback as receiving push notification on mobile.
3. Fixed the issue that it requires users to manually select video files to play the backup videos, instead of executing Playback.exe to play videos directly.
4. Fixed Korean characters display issue on local monitor. [2]
5. Volume status is shown correctly on the daily system report.

Known Issue

1. Transferring camera or POS license and rebooting system within 30 days after activation may pop up "error code: 268435468" in License Management page. This error won't impact any normal operation, please close the error dialog to continue. This issue will be fixed in v2.0.
2. If you got an error message with "error code 10006" when trying to logging in NVR system via ezNUUO, please uninstall this program and restart PC to try again.

---

[1] The bit rate of the camera to backup is 4Mbps. If the bit rate is higher, the more stable bandwidth is needed.

[2] We designed different fonts for different languages, to display correctly, please choose the right language on local UI.

Please find DP 2.17 release note for camera integration, bug fixed and known issue.
